

Team RRCO / Conductive Media

Composite Discharge Media

- Team RRCO/Conductive Media is a start up company located in Huntsville, AL
- The company focus is on novel engineered-materials for safe storage and transportation of Li-ion batteries
 - Safely discharging batteries to remove hazards associated with residual charge

- Conductive Media is formulating novel materials that can be used for the safe and rapid discharge of Li-ion batteries
- Materials are flow-able minimizing the need for fixturing and alignment of batteries
- Media is suitable for discharging individual cells or entire battery modules
- Materials are being engineered to have:
 - Tailored electrical conductivity
 - High temperature stability
 - Enhanced ability to dissipate heat

- We believe the solution can provide value to multiple other teams
- We are interested in Phase II partnering with teams focusing on:
 - Collection
 - Separating and Sorting
 - Storage and Transportation
 - Reverse Logistics
- We feel our solution can enable the safe storage and transportation of Li-ion batteries and can add value to multiple links in the recycling chain
- Team RRCO/Conductive Media can be reached at:
